Quadjoy Optional Joystick Attachment Instructions:

Only after you feel comfortable with the Quadjoy Mouse as a computer mouse, is it recommended that you begin using the joystick features. Once you are ready to use the joystick features, then do so according to the instructions below.

Before using your Quadjoy Mouse as a joystick for your computer, you will need to switch modes from mouse to joystick. To do this you will want to sip very lightly on the Quadjoy Mouse until the yellow light just goes out, and then immediately blow on the Quadjoy Mouse. When you have done this successfully, you will see the red and green lights flashing back and forth rapidly. The lights will flash for about 3 seconds, in which time the joystick should be centered as it is being calibrated. After the lights have stopped flashing, all three LED's will be lit up signifying that the Quadjoy Mouse is in joystick mode. During this time, the Quadjoy Mouse will not be able to be utilized as a mouse, but will have all the features of a joystick. The button clicks will be done in much the same way as the mouse however. There are two buttons, and they are controlled by the sipping and the puffing functions that normally right and left click. The Quadjoy Mouse will also be listed in the "Gaming Options" part of the Windows Control Panel for setup and configuration. When you are done using the Quadjoy Mouse as a joystick, repeat the same light sip until the yellow light goes out, followed by a strong puff, function to get the Quadjoy Mouse back into mouse mode. When this is done successfully, there will be no flashing of the lights, but rather an instant change back, as a mouse does not need to be calibrated. When the Quadjoy Mouse is back into mouse mode, and there is no suction or blowing pressure applied the yellow light will be illuminated and the red and green LED's will not be illuminated.

The changing of modes between mouse and joystick may be made at any time that the Quadjoy has power (i.e. a light is illuminated on the quadjoy with no pressure applied). Since this is the case, we recommend that you setup your game(s) with the Quadjoy Mouse in mouse mode, and switch only once the games have started, as to allow the most functionality out of your Quadjoy Mouse. Thank you for your purchase of the Quadjoy Mouse Joystick Attachment.

Thank You!
